| Code Storm 09 : Project Discussion Planning [channel search] [Targeted Announcements / API] / [Additional Webservices] The purpose of this gathering is to brainstorm and talk about new ideas and applications that could be written to enhance luminis. There are countless solo projects happening at each institution, some have made their way to LumDev.net, others have been silently released or quietly get shot down. Bring those ideas, as crazy as they seem, to the group and we'll talk about them. If you see a major short-coming that you think you have a solution for - bring it. If you have sample code, or actual code - bring that along too. All audiences are welcome, I'm sure non-techies have valid issues too since they tend to see things in a different way. I promise we won't pick on you. | Jonathan Wheat <i>Messiah College</i> | 1:15 - 2:15 Royale III | |
| myBucknell 2.0 In 2008, we came to the conclusion that our four year old campus portal was not meeting the needs of our faculty, staff and students. This session will share our portal redesign story and provide an overview of features of myBucknell 2.0. Join us to learn about how we engaged our campus to develop a myBucknell that is both functional and fun. Some of the key components of the new portal include a customizable dashboard, value added portal gadgets such as the Message Center, Today's Menu, Events Calendar and My Blackboard, and a set of content-rich internally focused web pages. | Lisa Veloz <i>Bucknell University</i> | 2:30 - 3:30 Majestic III | |
| PSP : What Sungard Missed and What We Had to Build With the release of Sungard's Enrollment Management software, it also released a Prospective Student Portal, a version of Luminis with some integration into the EM software. Having integrated both of these packages at Messiah, I'll address things that we had to build to turn it into a portal that we were proud to put in front of prospects. | Jonathan Wheat <i>Messiah College</i> | 2:30 - 3:30 Royale III | |
